

Soil & Nutrient Management Decisions to Optimise Crop & Pasture Production – Back to Basics

Are you looking to optimise soil fertility and make informed nutrient decisions that boost your crop and pastures?

Join us for a “back to basics” hands-on facilitated learning workshop focused on soil health and nutrient management. Designed for farmers, early career agricultural advisors or those just wanting to sharpen their skills, this workshop will help you make informed soil and fertiliser decisions to optimise both crop and pasture production, improve soil health, and ensure long-term sustainability.

What You'll Learn:

- Soil Sampling Techniques: How to accurately collect soil samples and assess variability in your fields.
- Understanding Soil Tests: What a soil test reveals about nutrient availability and soil health, and how to interpret results.
- Other Limiting Factors: Identifying factors such as pH, texture, soil depth, compaction and drainage that can limit crop and pasture growth.
- Managing Macronutrients: Best practices for managing nitrogen (N), phosphorus (P), potassium (K) and sulphur (S) for optimum productivity.
- Making Effective Nutrient Decisions: Creating a nutrient management plan for both crops and pastures.

**Limited Seats Available – Register Today for
this free workshop via the QR code below!**

Naracoorte

Friday 21st February 2025
Naracoorte Town Hall - upstairs
meeting room (stair access only)

Bordertown

Friday 7th March 2025
Bordertown Hotel, Galah Bar

All workshops will run from 9am - 3pm and are fully catered.
